

Safety, reliability, cost effectiveness.

Swiss leader in heat treatment for aircraft manufacturing.

PILATUS
Strategic partnership
since 1998.

Even if each player in the aviation supply chain plays its role, a coordinator, managing the heat treatment relevant communication between Tiers and OEMs, is missing. Gerster brings together the partners to optimise OEM specifications already in the design phase and to harmonise all production processes. Therefore, an individual communication concept has to be defined. On every important point of contact between the Tiers and the OEMs, Gerster can bring support to all heat treatment relevant subjects.

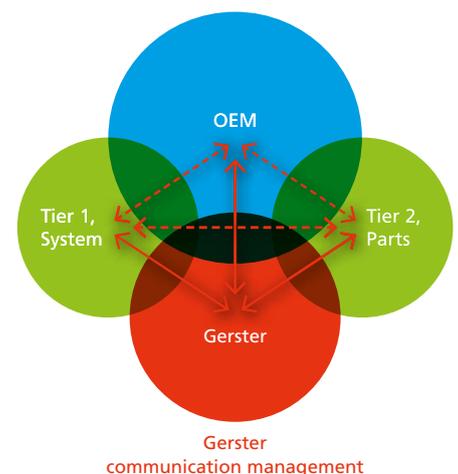

Strategic OEM-supplier experience since 1998 at your service

The benefits of the Gerster communication activities are higher safety, lower costs and a high transparency regarding heat treatment for each partner of the supply chain. We assist you in identifying your heat treatment relevant processes. To better serve the aerospace industry, we will be adding EN 9100 to our current certifications.

To achieve the maximum safety and cost effectiveness on aviation parts, producing to specification is not enough. The fundamental benefit for all parties involved arises when the effects of heat treatment are considered along the whole supply chain through an active and comprehensive communication.

Gerster communication benefits

- Higher safety
- Better performance
- Lower costs
- Shorter process time
